Education

AVN College of Engineering and Technology, B.Tech in Information Technology (JNTUH) Dec 2020 – June 2024

- GPA: 6.14/10

Narayana junior college, MPC JUN 2018 – Apr 2020

- percentage: 90.0

Depaul EM High school, JUN 2017-Apr 2018

- GPA: 9.0/10

Skills

Programming Languages: Python, Java, javascript

Web Technologies : HTML, CSS, React.js, Node.js

Database : MYSQL, MongoDB

Developer Tools : VS Code, Jupyter Notebook

Core Skills : Problem Solving, Debugging, Application Development, Prompt Engineer, Video coding

Experience

Indian Scientific Aerospace and Robotics Institute May 2025 – present
Software Developer , Intern

Developed a full-stack institute management website using MongoDB, Express.js, React, and Node.js, enabling students and administrators to manage courses, admissions, and inquiries seamlessly.

Designed and implemented responsive UI with React for user-friendly navigation across devices.

- Built RESTful APIs in Node.js and Express.js for handling student registration, course details, and faculty management.
- Integrated MongoDB database for storing student records, courses, and contact queries with secure CRUD operations.
- Implemented authentication authorization (JWT/bcrypt) for students and admin dashboards.
- Added features such as course catalog, event updates, contact form, and admin control panel.

Wi-Fi Based Attendance System React | Node.js | Express | MongoDB

Developed a web-based attendance tracking system using React (frontend) and Node.js/Express (backend) with MongoDB as the database.

Implemented Wi-Fi based authentication to mark employee attendance when connected to the office's network.

- Designed RESTful APIs for secure data exchange between frontend and backend.
- Built role-based dashboards (Admin/Employee) for real-time monitoring and management.
- Improved efficiency by eliminating manual attendance processes and ensuring accurate data storage.
- Deployed the application on [platform you used: Render/GoDaddy.] for real-world usability.

Projects

Machine Learning Techniques for Cyber Attacks Detection

- This is typically accomplished by automatically collecting information from variety of systems and networks sources, and then analysing the information for possible security problems.
- Tools Used: Python, Machine learning

Brain Stroke Prediction Using Machine Learning

- By developing a predictive model using machine learning algorithms to accurately predict the likelihood of an individual experiencing a brain stroke based on their medical history, lifestyle factors, and demographic information
- Tools Used: Python, Machine learning

Certificates

Certification by Great Learning Academy on React JS

Certification by Great Learning Academy on Introduction to JavaScript

Certification by Great Learning Academy on End-to-End MySQL:Schema to Subqueries
